

Which is the best electricity tariff for me?

Decision

Flat Rate Scale should be more economical for me:

I live in Alderney for less than 6 months of the year

Or it's for my Garage, workshop or other area which  
Has its own separate electricity supply

Recommended

Flat Rate Scale at 29.89pence per unit + Fuel Cost Component  
Note: There is a minimum quarterly charge of 25 units in  
addition to the meter rental.

Domestic Two Part Tariff should be better for me because

I live in Alderney for most of the year.

Recommended:

Domestic Two Part Tariff at 18.53pence per unit + Fuel cost component.  
A fixed Quarterly Standing Charge is applied: for up to 6 rooms @ £7.25 per  
Room, further rooms @ £5.46 per room.  
(Rooms 250sq.ft. or more count as 2 rooms)

Separate tariffs apply to:

Water Heating \*\* 10.40pence per unit+meter rent for a designated permanently wired supply to a water heater only, for example an immersion heater or similar.

Storage Heaters \*\* 10.40pence per unit (off peak) 11pm to 7am, with midday boost 12.30 to 3.30pm (one hour later during British Summer Time) on a designated supply. (\*\*Fuel Cost Component applies to these tariffs too.)

Pay as you go meters \*\* 38.00pence per unit Flat Rate, or 28.00pence per unit when used for a water heater.

Meter Rental \*\* Single phase £1.51 per meter per quarter. Three phase £4.53 per meter per quarter.
