

Head of Engineering

(competitive salary)

Alderney Electricity Ltd is the main energy provider for the Channel Island of Alderney generating and distributing electricity and importing fuel oils for heating and transport.

Small remote communities are facing a challenging transition to a sustainable, secure energy system. After several years upgrading the island's power station and distribution grid to provide a solid foundation, the Company is ready to continue this journey. The Company is creating an Engineering profit centre and, following the retirement of the previous incumbent, is now looking to recruit someone to lead the technical team through the challenges ahead. This is a key role for the Company and for the future of the community.

You will have a strong understanding of the design and management of electricity distribution systems. You will hold a higher qualification in a relevant Engineering discipline or have gained an equivalent understanding of the engineering principles involved "on the job". You will understand the issues of the integration of renewable energy generation into conventional systems and ideally have experience of the management of both supply and demand side energy assets through smart grids. Ideally, you will have experience of managing a profit centre and been responsible for agreeing and delivering against targets and budgets.
